课程目标

- 知道Internal ITK开发原理;
- 掌握User Services开发方式;

目录

■ User Services开发;

Internal ITK开发原理

- ✓ Supplier Custom Hooks 允许不冲突的客户化同时存在
- ✓ 所有 server-side 客户化,包含 User Exits 与 User Service (Server Exits)都在 library内,命名为 < site-name >.dll
- ✓ 一个 site 可以有多个 dll
- ✓ 定义一个允许多重值的 site preference
 - ✓ TC_customization_libraries =
 - ✓ site-name
 - ✓ site2-name
- ✓ 编写 custom callbacks 的 .c 文件 , 注册 custom callbacks
 - ✓ #include <tccore/custom.h>
 - ✓ #include <user_exits/user_exits.h>
 - ✓ extern DLLAPI int *site-name_*register_callbacks()
 - { CUSTOM_register_exit ("site-name", "Base User Exit Function", (CUSTOM_EXIT_ftn_t) your-custom function-name) }
- ✓ 。开头的 , 均可以采用 Custom Exits 方式改写

Internal ITK开发原理

在 *site-name_*register_callbacks() 函数内注册的 custom function 应该都要有一个整数指针为第一个参数。这个整数指针应回传 decision,指出是否只执行目前的客户化、执行所有的客户化,或只执行缺省的核心功能。这变量定义在%TC_ROOT%\include\tccore 目录内的文件 custom.h。一般设定 ALL_CUSTOMIZATIONS

#define ALL_CUSTOMIZATIONS 2

#define ONLY_CURRENT_CUSTOMIZATION 1

#define NO_CUSTOMIZATIONS 0

在%TC_ROOT%\sample 目录内,函数名称以 USER_或 USERSERVICE_。开头的,均可以采用 Custom Exits 方式改写

User Services开发过程

- > User Services 无法单独被执行,必须由 Rich Client 调用
- ▶ 定义 User Services 的步骤
 - 1. 需要修改的基本函数为 USERSERVICE_register_methods()
 - 2. 先在 *site-name_*register_callbacks() 函式内定义

CUSTOM_register_exit("*site-name*",, "USERSERVICE_register_methods", (CUSTOM_EXIT_ftn_t) CUST_register_methods);

- 3. 在文件 cust_server_exits.c 编写新的函数 CUST_register_methods(), 注册 user services
 - ✓ 使用 USERSERVICE_register_method() 注册 user services
 - ✓ 定义 user service 函数名称
 - ✓ 指定输入叁数的数量与数据类型,同时指定输出的数据类型
 - USERSERVICE_register_method("your-userservice-function-name",

your-userservice-function-point, number-of-arguments,

type-array-of arguments, return-value-type)

4. java端进行调用。

- 1. 新建工程mslib。
- 2. 新建源文件user_services_item.cpp,并在源文件中添加函数createItem。代码如下所示:

```
int createMyItem(void *retValue)
ł
               int retcode = ITK_ok;
               int status = 0;
   tag_t itemTag;
   tag_t revTag;
   char *itemId = NULL;
   char *itemRev = NULL:
   char *itemName = NULL;
   USERARG get string argument (&itemId);
   USERARG_get_string_argument (&itemRev);
   USERARG get string argument (&itemName);
   retcode = ITEM create item(itemId, itemName, "Item", itemRev,&itemTag,&revTag);
   if(status == retcode )
      AOM save (itemTag);
      AOM save (revTag);
    *( (tag_t *) retValue ) = itemTag;
    return retcode;
```

3. 新建itk_service_register.cpp源文件,并编写方法

```
USERSERVICE_custom_register_methods(),注册createItem方法,源代码如下所示:
```

```
int USERSERVICE custom register methods()
{
           int status = ITK ok, numberOfArguments = 3, returnValueType =
USERARG TAG TYPE, *argumentList = NULL;
            USER function t functionPtr = createMyItem;
            argumentList = (int*)MEM alloc(numberOfArguments * sizeof(int));
            argumentList[0] = USERARG STRING TYPE;
            argumentList[1] = USERARG STRING TYPE;
            argumentList[2] = USERARG STRING TYPE;
            USERSERVICE register method("MS NewItem", functionPtr,
numberOfArguments, argumentList, returnValueType);
            MEM free(argumentList);
            fprintf( stdout, "\n Registering MS NewItem finished\n\n" );
            return(status);
```

4. 注册user service到主类。代码如下:

```
#ifdef __cplusplus
]extern "C" {
 #endif
1/**
                         extern "C" DLLAPI int mslib_register_callbacks
 * @fn
 * @return
                         usually return ITK ok
                         hangsheng customization entry
 * @brief
-*/-
JDLLAPI int mslib_register_callbacks()
 {
     int ifail = ITK_ok;
    //注册user_services
     fprintf( stdout, "\nRegistering user services...\n" );
    ITKCALL( ifail = CUSTOM_register_exit( "mslib", "USERSERVICE_register_methods",
         (CUSTOM_EXIT_ftn_t)USERSERVICE_custom_register_methods));
     fprintf( stdout, "\nRegistering user services completed!\n" );
     return ifail;
 }
#ifdef __cplusplus
- }
 #endif
1/**
 * @}
·*/
```

5. 编译工程为mslib.lib,然后拷贝该lib库到TCROOT\bin目录,如下图:

💳 D:\Siemens\Teamcenter8\bin				
文件 (E) 编辑 (E) 查看 (V) 收藏 (A) 工具 (E) 帮助 (H)				
😋 后退 👻 ⋺ 🚽 抄案 🌔 文件夹 │ 🎹 ▾				
地址 @) 🛅 D:\Siemens\Teamcenter8\bin				
名称				
文件和文件夹任务	*	Smslib. dll		
 ② 创建一个新文件夹 		<pre> process_move_volume_files.bat libugmath.dll libtccoresvc.dll libtc_utils.dll libtcctimpl.dll libtcsoastructuremanagementtypes.dll</pre>		
其它位置	*	Slibtcsoamultisite.dll		
☐ Teamcenter8 ☐ 我的文档 ☐ 共享文档		Ilbtcsoaconfigurationstrong. dll Ilbtcsoacadbomalignmenttypes. dll Ilbpom. dll icuuc341. dll		

7. 在Teamcenter系统中进行注册,选项,然后新建选项,TC_customization_libraries

(名称				
TC_customization_libraries (S	Site)			
	\equiv			
General	~			
────────────────────────────────────				
mslib				
	-			
	\$ 1			
·				
·细俗意 新孝 炎別 景入 景光				

8. 在客户端java代码中进行调用代码编写,如下:

```
TCUserService userServ = sessionObj.getUserService (); // where sessionObj is an object of TCSession
Object objs = new Object[3];
String itemId = new String("1234");
String itemRev = new String ("A");
String itemName = new String ("Nameof1234");
objs[0]=itemId;
objs[1] = itemRev;
objs[2]=itemName;
TCComponent itemComp = (TCComponent) userServ.call ("createItem", objs);
```
